SAMPLE MEDICAL REPORT

For DoctorInsight Testing and Demonstration Only

Patient Name: Rahul Sharma Age: 52 years Gender: Male

Patient ID: DEMO-2026-001 Date of Consultation: 08 October 2026

1. Chief Complaint

The patient reports increased tiredness, frequent thirst, and frequent urination for approximately three weeks. He also reports occasional headaches and mild dizziness, particularly in the evening.

2. Medical History

The patient has a history of hypertension for approximately five years. He has been taking medication for blood pressure control. No previous history of major surgery was reported.

Family History: Father had Type 2 Diabetes Mellitus.

Lifestyle: Sedentary lifestyle and frequent consumption of carbohydrate-rich foods. Physical activity is limited.

3. Vital Signs

Parameter	Result
Blood Pressure	148/92 mmHg
Heart Rate	84 bpm
Temperature	98.4°F
Respiratory Rate	18/min
SpO·	98%
Weight	82 kg
Height	172 cm
BMI	27.7 kg/m²

4. Laboratory Investigations

Test	Result	Reference Range
Fasting Blood Glucose	142 mg/dL	70·99 mg/dL
HbA1c	7.1%	<5.7%
Total Cholesterol	218 mg/dL	<200 mg/dL
LDL Cholesterol	142 mg/dL	<100 mg/dL
HDL Cholesterol	42 mg/dL	>40 mg/dL
Triglycerides	176 mg/dL	<150 mg/dL
Hemoglobin	14.2 g/dL	

13·17 g/dL
Creatinine
1.0 mg/dL
0.7·1.3 mg/dL

5. Clinical Assessment
The laboratory findings show elevated fasting blood glucose and HbA1c levels. The lipid profile also shows elevated total cholesterol, LDL cholesterol, and triglycerides. The findings may be consistent with poorly controlled blood glucose and dyslipidemia. Blood pressure is also above the commonly recommended range. Further evaluation by a qualified healthcare professional is recommended before making a diagnosis or changing medication.
6. Current Medications
1. Amlodipine 5 mg once daily.
2. Paracetamol 500 mg as needed for occasional headache.
Note: Medication changes should only be made by the treating healthcare professional.
7. Doctor's Recommendations
• Monitor blood glucose regularly.
• Maintain a balanced diet with appropriate carbohydrate intake.
• Increase physical activity gradually as medically appropriate.
• Monitor blood pressure at home.
• Follow up with the physician for diabetes evaluation.
• Repeat relevant laboratory investigations as advised.
8. Risk Factors Identified
• Elevated fasting blood glucose
• Elevated HbA1c
• Elevated LDL cholesterol
• Elevated triglycerides
• Elevated blood pressure
• Overweight BMI
• Sedentary lifestyle
• Positive family history of diabetes
9. Follow-Up
Recommended follow-up: Within 1·2 weeks or according to the treating physician's instructions. The patient should seek urgent medical attention if severe symptoms such as chest pain, difficulty breathing, fainting, severe weakness, confusion, or other concerning symptoms occur.
